

FOR IMMEDIATE RELEASE

AERC.com, Inc. Adapts SDDS Program for the Commercial Industry

Flanders, NJ – March 29, 2009 – AERC.com, Inc. (AERC Recycling Solutions) is pleased to announce recent upgrades to the Secure Data Destruction & Surplus (SDDS) Program. The SDDS program specializes in complete asset management for end of life electronics while providing secure data destruction, chain of custody documents, web-based client interface, a secure processing facility, as well as clean, “Green” recycling. SDDS is a tool that improves efficiency and guarantees simplicity for Electronics Asset Management & Recycling. When paired with AERC’s Advanced Sustainability & Downstream Due Diligence procedures, clients can rest assured that their sensitive data is destroyed and electronic assets are properly disposed of. These improvements will “open the door” and allow commercial clients to benefit from a Program that the Commonwealth of Virginia has utilized for the past five years.

Details of the changes and improvements are below.

Asset Management Module

AERC has added on a fully functioning Asset Management module to the existing SDDS application. This addition will allow users to track electronic assets from the time of purchase, through software installations and customization, and then deployment to users within their company. Users can enter all specs for the various equipment types, all software and serial codes installed on computers, and pictures of the equipment. There are numerous reports available for equipment availability, equipment locations and distribution lists, financial reports and lease/own reports. With the touch of a button, the user can surplus their assets and will automatically begin the standard SDDS end-of-life disposal process.

Universal Pricing Structure

A universal pricing structure has been created that can be easily customized to fit the diverse demands of the market.

Universal Asset Type Structure

The asset type structure has been expanded and can be easily customized to adapt to any client type, whether it be an OEM manufacturer of Desktop Computers or the leading producer of Interactive Gaming Consoles.

Generic Home Page, Reports & Website Address

The look of the SDDS Home Page and all reports have been streamlined and organized to meet the requirements of many Purchasing & Procurement guidelines. In addition to the existing www.covsdds.com address, AERC has implemented <http://sdds.aercrecycling.com>. Both addresses point to the same location.

Advanced Reporting Capabilities

More advanced reporting for initial quotes, invoice detail, inventory, asset disposition tracking and hard drive sanitization/destruction have been created.

Online demos of the SDDS application can be conducted by request. Please contact the SDDS Program Manager to set an appointment convenient to your schedule!
